

Asterisk Arm-Allstar on the Raspberry Pi 2/3

Doug Crompton, WA3DSP

Modified by Robert Conklin, N4WGY

WHAT IS THE ALLSTAR LINK SYSTEM?

- A melding of Asterisk PBX and Linux based repeater control code. Completely free and open source.
- Allows agile linking of single nodes, hubs, repeaters, link radios, mode bridges, phones, auto patch, etc.
- Independent operation, no mother ship.
- Strong user community support.
- Large and growing user base, 2080+ nodes online around the world at this time.

Comparison of Amateur Radio VOIP systems

Echolink

- ❑ Free and convenient
- ❑ Not open source – limited API (Application Programming Interface)
- ❑ Limited audio quality – GSM – half duplex
- ❑ Relatively easy to use
- ❑ Large user base
- ❑ Largely computer or phone originated
- ❑ Stable
- ❑ Not best choice for repeater linking

Comparison of Amateur Radio VOIP systems

IRLP – Internet Radio Linking Protocol

- ❑ Not open source – requires hardware purchase
- ❑ Good audio quality – ADPCM – half duplex
- ❑ Smaller user base
- ❑ Only radio originated
- ❑ Low number of nodes
- ❑ Limited linking agility

Comparison of Amateur Radio VOIP systems

Allstar

- ❑ Fully open source hardware & software - free
- ❑ Excellent audio quality – full duplex
- ❑ Full repeater control imbedded!!
- ❑ Choice of codecs to meet available bandwidth
- ❑ Smaller user base - growing FAST - 2080 online now
- ❑ Radio, SIP phone or smart phone or computer originated.
- ❑ Endless linking and bridging capabilities
- ❑ Low cost
- ❑ Echolink, d-star, C4FM, P25 and other service bridges
- ❑ Requires some LINUX knowledge
- ❑ Strong user base support

Comparison of Amateur Radio VOIP systems

Other formats – WiresX, D-Star, DMR, P25

- Mostly proprietary
- Varying audio quality
- Limited API

History of Asterisk

1999 – Mark Spencer (Huntsville AL) started a Linux software company

The company grew and needed phone services
They discovered available systems were very expensive

So they wrote their own PBX software

They formed a company called Digium in 2001 and
their software... Asterisk... is now used to run the phone
systems in
thousands of companies worldwide.

Asterisk Allstar Radio VOIP

History of app_rpt

Asterisk is written to allow additional applications to extend its capability, it is its very nature!

The app_rpt application was written by Jim Dixon, WB6NIL and Steve Rodgers, WA6ZFT in the mid 2000's for fulfill his need for a repeater controller and VOIP interface.

Original system used a Quad PCI radio interface card
Later used USB sound card interface

ARM (processor) Allstar for the Raspberry Pi

Features

- ❑ Linux operating system (Arch Linux distro)
- ❑ Fully open source – Modify and extend the code
- ❑ Easy to install and maintain – gets easier as time goes on and code matures.
- ❑ Runs on Rpi 2 or 3, not the Rpi model A or Pi Zero.
- ❑ Ability to select CODECS
- ❑ Great for restricted antenna areas – gives feel of radio
- ❑ Allows public or private connections
- ❑ Any number of nodes can be connected together
- ❑ Connection process totally at the discretion of the user
- ❑ Unlimited servers and nodes per IP address

ARM (processor) Allstar for the Raspberry Pi

Features Continued

- .Full Duplex
- .Integral Repeater Controller
- .Connections to/from Phone PBX via a sip, iax
- .No single point of failure – no mother ship
- .Build the system the way you want

ARM (processor) Allstar for the Raspberry Pi

CODECS

A codec is a device or computer program capable of encoding or decoding a digital data stream or signal.

ULAW

- .64Khz
- .Lossless
- .Excellent quality
- .Least used

ILBC

- .Internet Low Bandwidth Codec
- .1/3 BW of g726aa
- .Very close to g726 quality

G726aa

- .modified G726a
- .48Khz sample rate
- .Very good quality
- .Most used

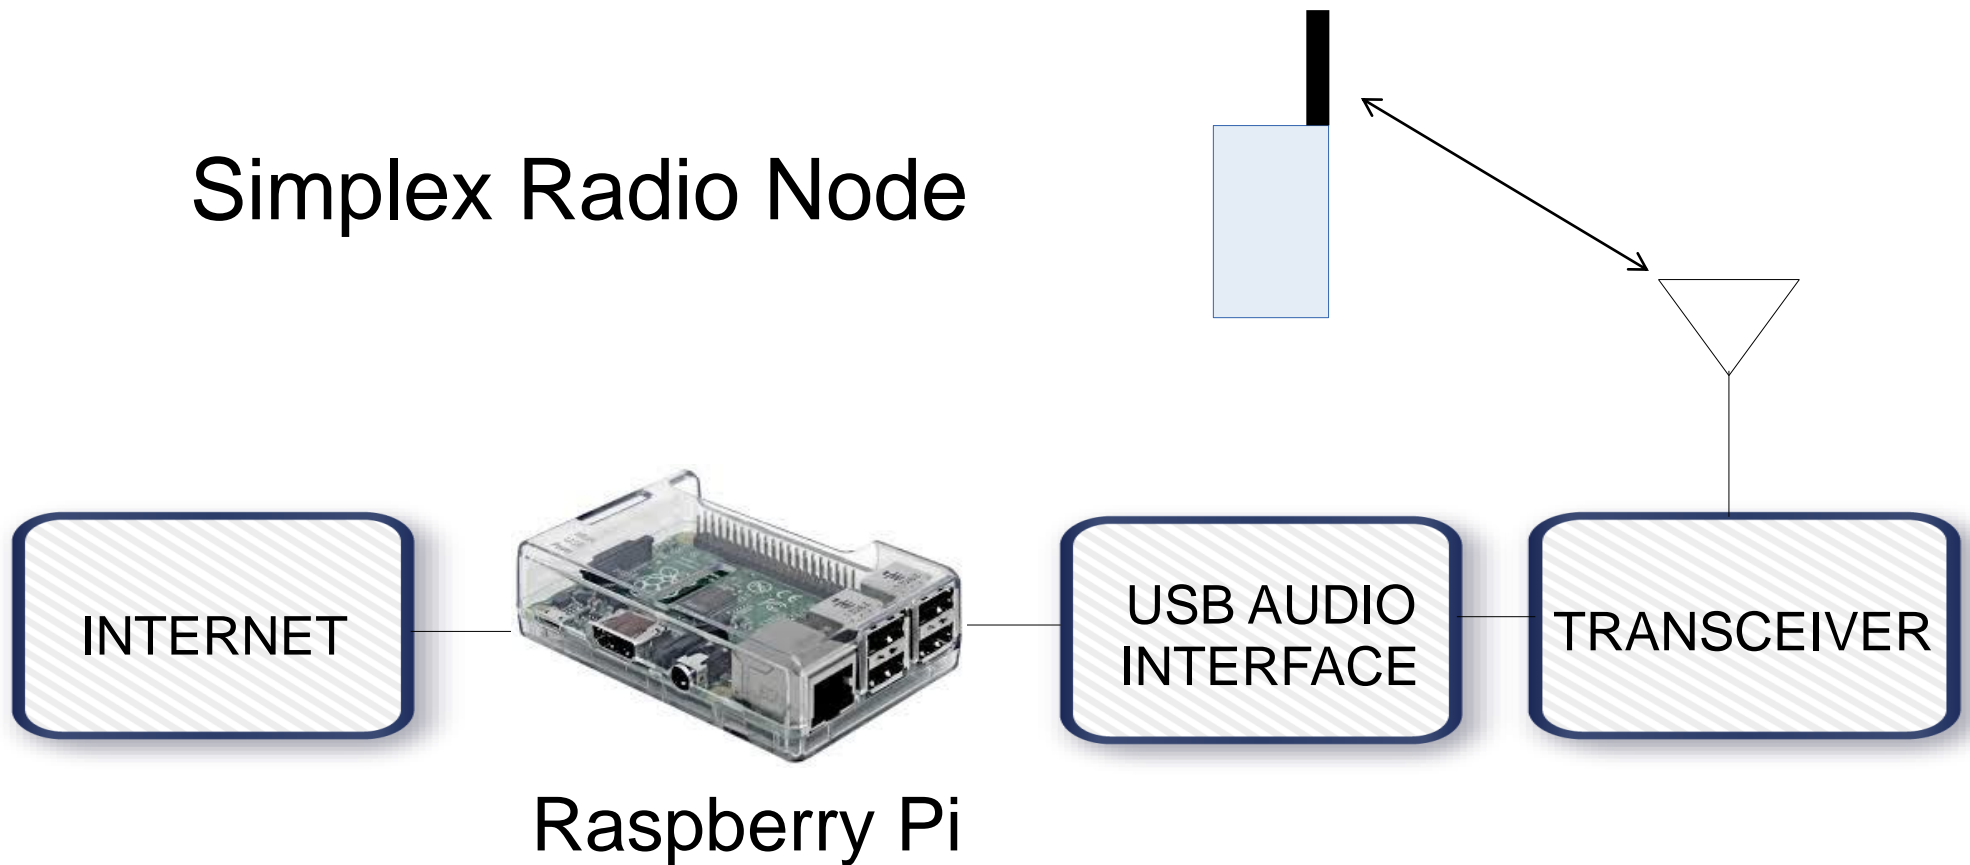

GSM

- .Very low sample rates
- .Low bandwidth
- .Fair quality
- .Seldom used over VOIP
- .Local voice messages

Asterisk Allstar Radio VOIP

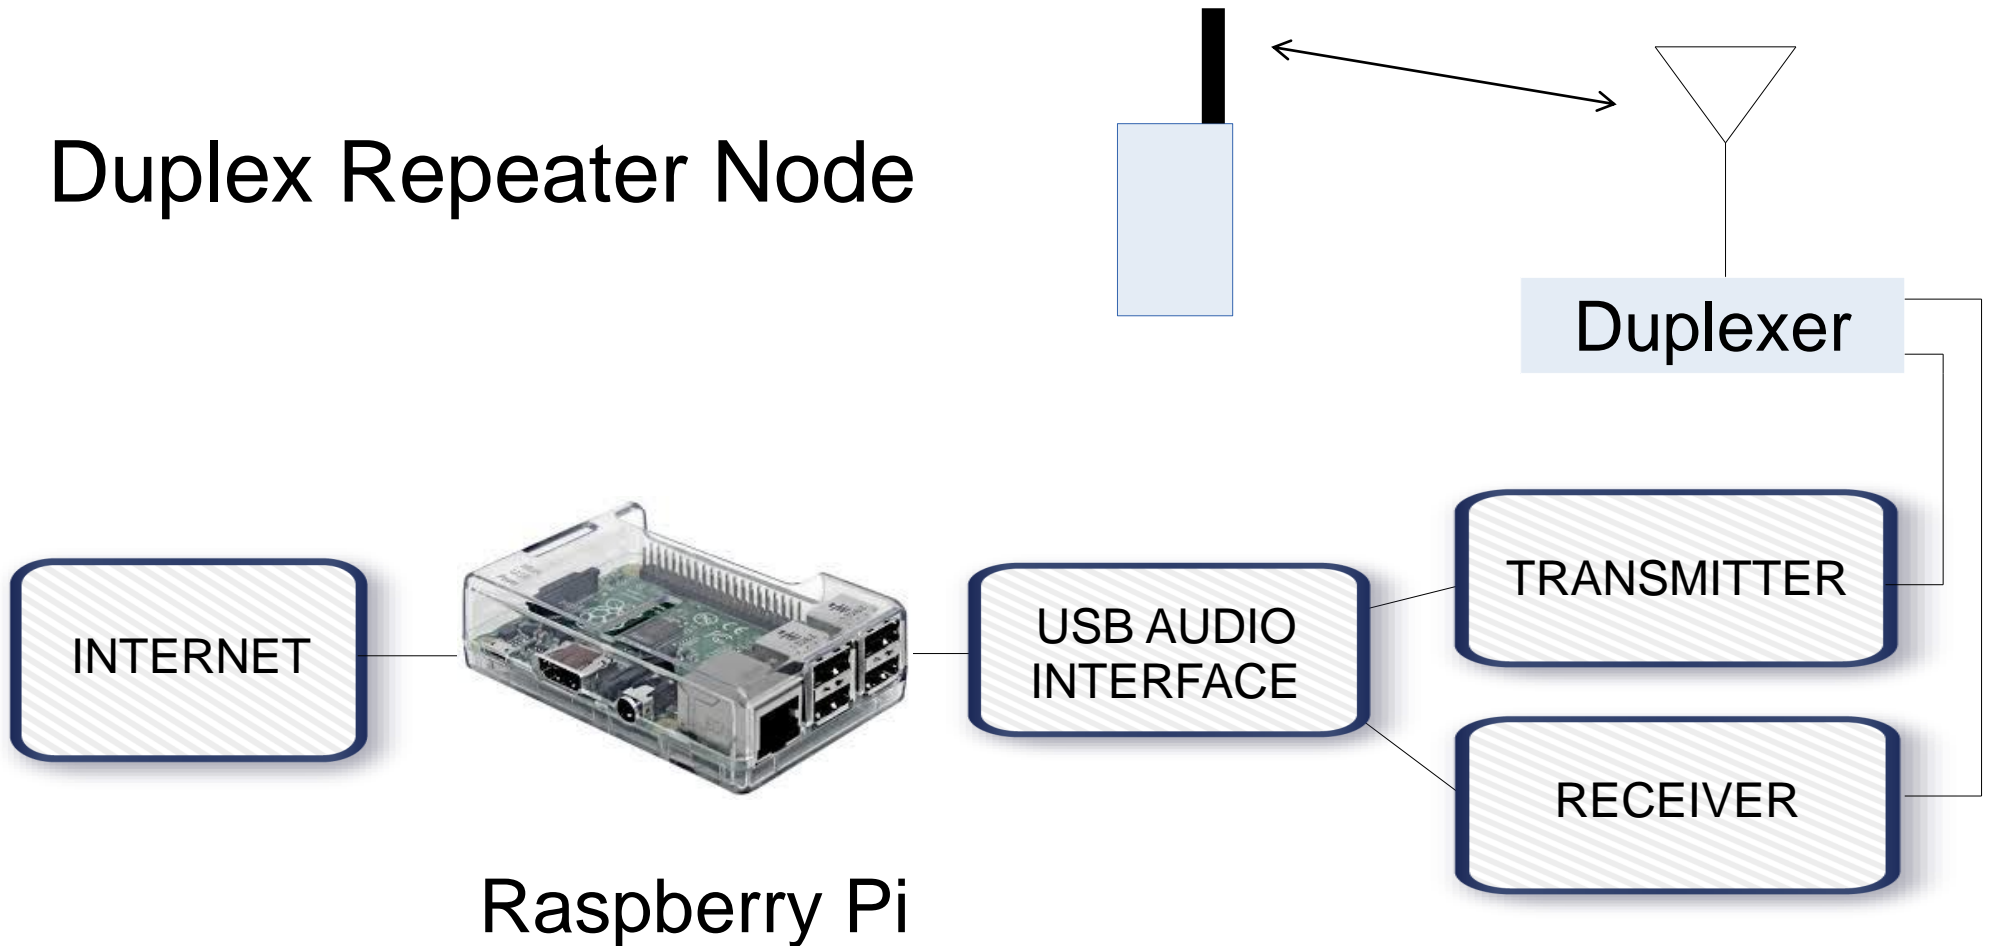

What does a simple Allstar node look like?

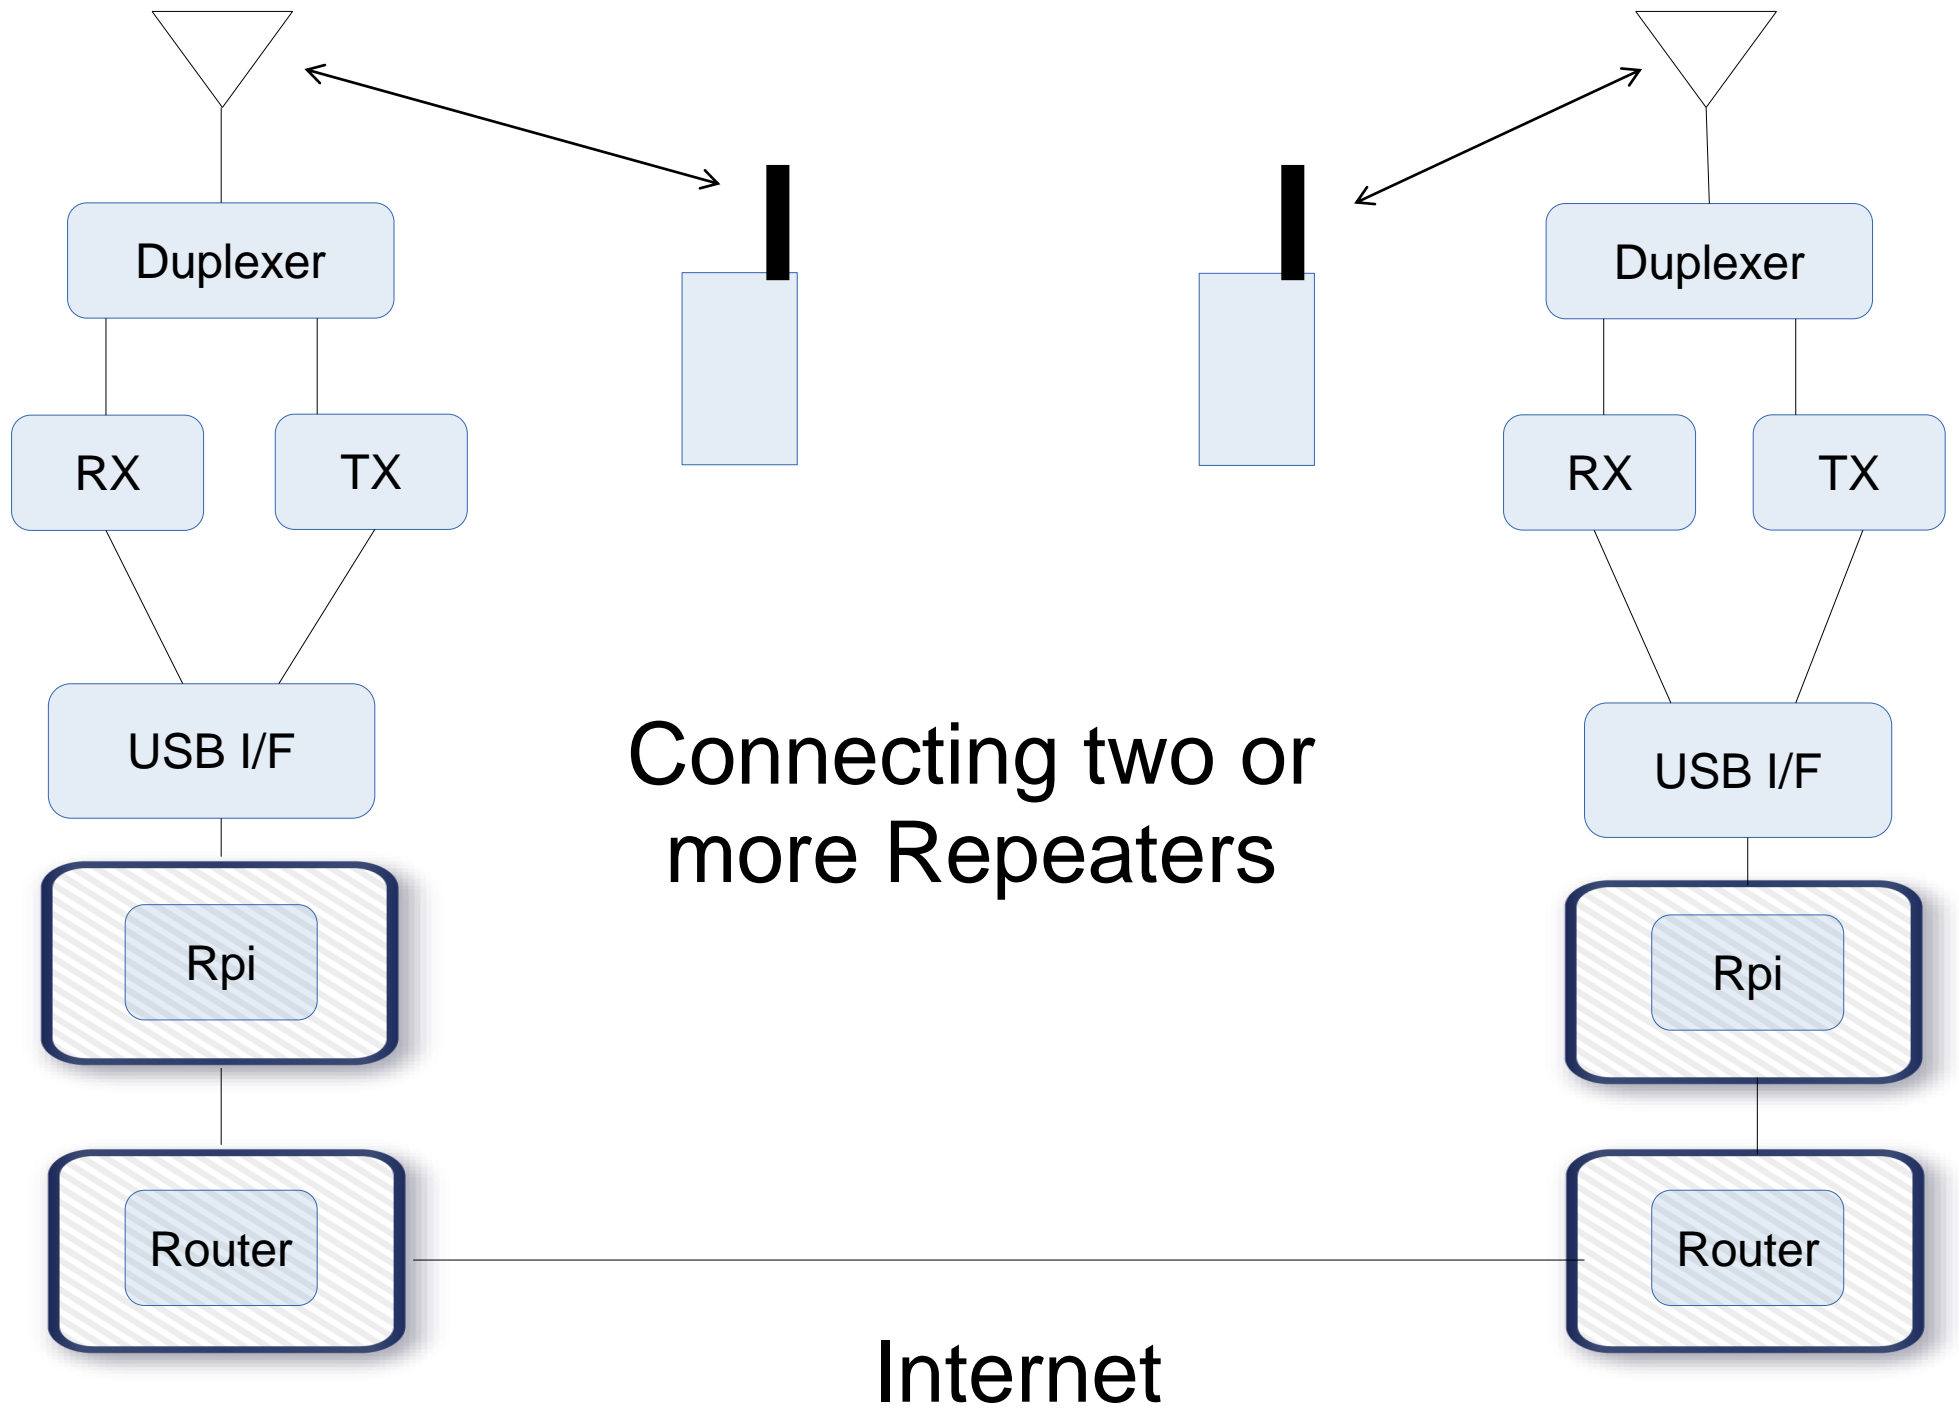

Simplex Radio Node

- A complete Arm-Allstar UHF simplex node.
- Rpi-3
- Baofeng BF-888 handheld transceiver
- USB Soundcard fob

- A complete UHF repeater.
- Motorola CDM radios.
- DMK Engineering Radio Interface
- Rpi3
- Mobile duplexer

The N4WGY 444.75Mhz is a Allstar/Echolink/Autopatch repeater, fully controlled with Asterisk/Allstar on an Rpi!

NARA – North Alabama Repeater Association
Uses Allstar on link radio's and controller ports to greatly
enhance repeater linking and mode bridging options.

**DOWNLOAD OF THIS PRESENTATION WIL BE
AVAILABLE AT [WWW.N4HSV.NET](http://www.n4hsv.net)**

444.750 MHz +5, PL 131.8 Hz, N4WGY

Allstar Node 42754

EchoLink node 552261 (N4WGY-L)

443.80 MHz +5, PL 110.9 Hz, W4PS

Allstar Node 42738

EchoLink Node 704319 (N4WGY-R)

DTMF Commands for linking and basic controller commands:

Please disconnect links after you are done with them.

Allstar Node Linking/un-linking

*1 Link Disconnect (*1 plus the Allstar Node number you wish to unlink from)

*2 Link Connect (Monitor Only, *2 plus the Allstar node number you wish to monitor)

*3 link Connect (*3 plus the Allstar node number you wish to link to)

*51 Time of Day + ID

*66 Repeater DVR/Parrot mode (send *66 plus test speech without letting off PTT, repeater will parrot after release of PTT)

*70 Link Status

*73 Full Link Status

*76 Disconnect all links

*81 Time of day only

Telephone Auto Patch Access:

your ID and check repeater schedule and link status before using Auto Patch. You may not want linked nodes or hubs to hear your phone call.

***61 + area code + phone number**

To hang up send: ***0**

If you get a busy signal send ***0**

If the telephone side hangs up, no further action is necessary.

Say your ID at autopatch QSO end

EchoLink Access:

To connect to an EchoLink node:

*33 + node number padded with zeroes to 6 digits.

To disconnect to an EchoLink node:

*13 + node number padded with zeroes to 6 digits.

Examples:

To connect/disconnect to EchoLink node number 86082 = *33086082, *13086082

To connect/disconnect to EchoLink node number 9999 = *33009999, *13009999

SCHEDULE FOR BOTH REPEATERS:

ARRL News airs at 8:00PM Mondays

Amateur Radio Newsline (ARN) airs at 7:30PM Wednesdays

Alabama Friends Net 8:00PM Wednesdays

Ham Nation "After" Net from 9:00PM to 10:00PM Wednesdays

Re-airing of ARRL news at 8:00PM and ARN news at 9:00PM on Saturdays

UK Allstar Hub 41223, daily from 6:00 AM to 10:00 AM.

For list of active Allstar Nodes: <http://stats.allstarlink.org/>

A couple of my favorites:

41223: UK Allstar Hub

27066: UK Allstar Hub

27225: WA3DSP Philadelphia PA hub

**MODIFIED USB SOUNDCARD FOB.
CM108 USB AUDIO SOUND CHIP.**

**AVAILABLE ON EBAY, BANGGOOD AND
OTHER ONLINE VENDORS FOR AN
AVERAGE OF \$5 APIECE.**

**SEARCH FOR “SANWU USB SOUND” OR
“SANWU HF07”**

DMK Engineering URI (Universal Radio Interface)
Little pricey ~\$70, but works GREAT and has added
benefit of providing diode protected onboard 5vdc
GPIO. The DMK URI is particularly well suited for use
in a duplex Allstar repeater.

<http://dmkeng.com/>
